IANA Changes from the IETF Perspective

Jari Arkko, IETF Chair

ISOC Board meeting, April 7, 2014
What Is Going On

- March NTIA announcement
- Start of discussion at ICANN
- Discussions at IETF, RIRs, ...
- US political discussions
- World reactions
The Larger Context

- Long-term IANA evolution in I*
- Various aspirations from (inter-) governmental organizations
- Aligned but still slightly different aspirations in I*
- The heightened IG interest in 2013-2014
- Easiest topic to discuss (names, in particular)
- The effects of the NTIA announcement
IETF Discussions

• Much of this is already in RFCs (2860, 6220)

• Good discussion and outcome from IGOVUPDATE IAB session: principles, content ownership (Steve)

• IANA program is very active and productive

• Discussion continues, we will engage in ICANN process

• Challenges: time/interest to participate everywhere, occasional desire on IETF side to avoid discussing "political" things, IAB/IETF work split, getting run over or ignored in view of the more visible issues on names side, ...
Strategy

• The IETF is in a good situation wrt IANA
• Promote the system (not individual parts or organizations)
• IETF needs to decide its own fate
• We are not too eager to make contract or model changes
• Keep process for different IANA parts separate
• Promote policy-implementation-oversight separation
